Volume 1 Issue 2

June 2007

Here Comes the Sun!

Would you like to kick back and enjoy the days of summer with healthy, supple, radiant skin? We're not just talking about repairing and renewing your face! Visit Apothecary and we'll work with you to create a personalized skin care regimen, coupled--if necessary--with minor corrective cosmetic treatments. Your entire body can have a beautiful, healthy glow all summer long!

Exfoliation is the key to glowing skin year-round, but it's especially important now. Slough off dead skin cells that have accumulated on your skin from the dry winter months. Our skin care specialists will customize a treatment based on your skin type or condition. We'll wrap your body and senses in a luscious blend of organic ingredients from Ilike (pronounced "il-ee-ka") to detoxify, improve hydration, and eliminate toxins. Just completing this step will make your skin look much more radiant than before, guaranteed!

In recent years there has been a growing awareness of the sun's damaging rays. We are eager to provide you with solutions. If you are going to tan this summer, self-tanner is the safe and healthy choice for glowing, bronzed skin.

Apothecary offers a spray on tan by **SunFx Pro**. **SunFx** utilizes a natural streak free, pure derivative of sugar called DHA, highly purified water and natural salt bronzers to interact with amino acids in the outermost layers of the skin to produce an odorless tan in as little as 10 minutes. Unlike some other spray on tanners you may have used or heard of, with **SunFx Pro** there are no nasty airborne chemicals or smells. **SunFx Pro** will not clog your pores, or leave you with a sticky feeling. Our skin care specialists distribute your color carefully and thoroughly. And there's no chance of ending up looking like an "Oompa Loompa", because the products are designed to bring out the natural melanin in your skin. Your tan will be exactly as dark as it should be — and the perfect tone.

We recommend and offer professional skin exfoliation prior to receiving your spray tan.

Call 908-996-6300 to schedule your body treatment today! ~12 Bridge Street Frenchtown, NJ 08825

Sunscreen should be part of your daily ritual ...and it's a must-have if you're going to spend hours in the sun.

IS Clinical Sunscreen Powder SPF 20 - Sunscreen Powder SPF 20 provides the ultimate broad spectrum sun protection, using the finest "physical" UVA/UVB blockers in a nanotechnology formulation. The micronized mineral filters, Titanium Oxide and Zinc Oxide, help to prevent sunburn erythema while providing protection against UVA/UVB radiation linked to premature aging and skin damage. Unique way of application, the powder is released thru the bristles of the brush—just brush on your face and you are out the door!

SkinCeuticals Ultimate UV Defense SPF 30 - This broad spectrum (UVA/UVB) sunscreen was designed for individuals with photo-sensitive skin, or for days when you need more protection. The addition of 7% transparent zinc-oxide provides extra protection from damaging UVA rays, the rays proven to cause premature signs of aging in skin.
SkinCeuticals Ultimate UV Defense Sport SPF 45 - This waterproof, sweat proof sun block contains 4.5% zinc-oxide and delivers maximum protection during high-energy activities.

La Roche-Posay's Anthelios SX - A breakthrough moisturizer with sun block that uses three powerful UV fighters to provide complete broad spectrum sun protection. It contains Mexoryl SX, a unique organic UV filter that recharges for longer protection. Other UVA filters are not photo stable, meaning once they absorb UV rays, they lose their effectiveness. The sunscreens in Anthelios SX absorb the sun's radiation, then safely emit it in order to absorb more. This gives Anthelios SX the highest photo stability, staying up to 90% active even after 5 hours.
